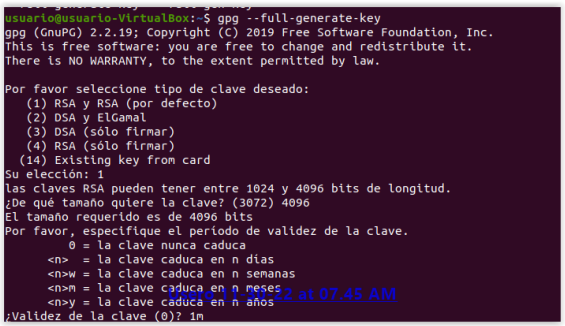
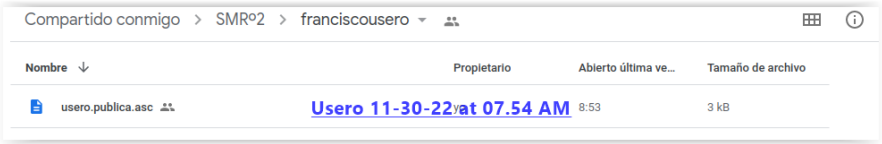
Abrimos nuestra maquina virtual
Creamos nuestra clave publica , mi clave de paso es Elpepazo1

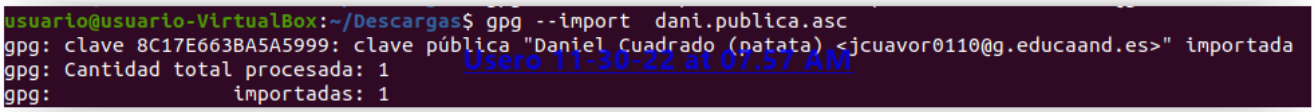


Exportamos mi clave publica

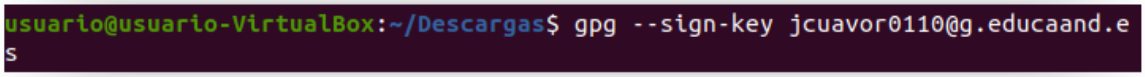
La subo al drive compartido

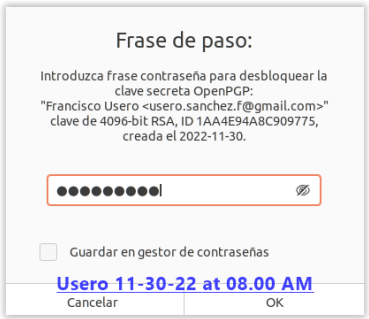


Descargamos la clave publica de otro
La importamos al llavero



Firmamos su clave , después nos pedirá nuestra clave de paso

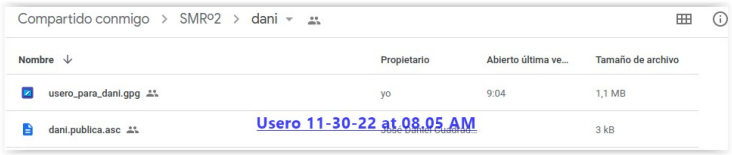




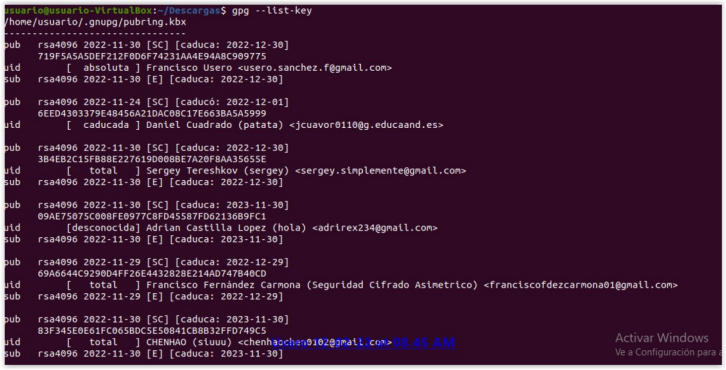
Encriptamos nuestra foto con su clave publica

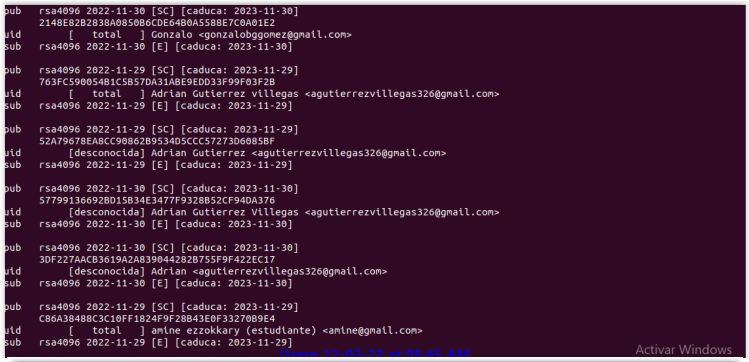
```
usuario@usuario-VirtualBox:~/Descargas$ gpg -o usero_para_dani.gpg -r jcuavor0110@g.educaand.es -e usero.jpg
```

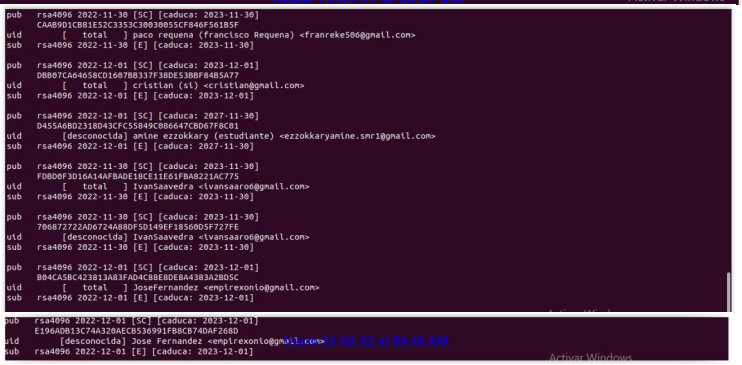
Se la subimos



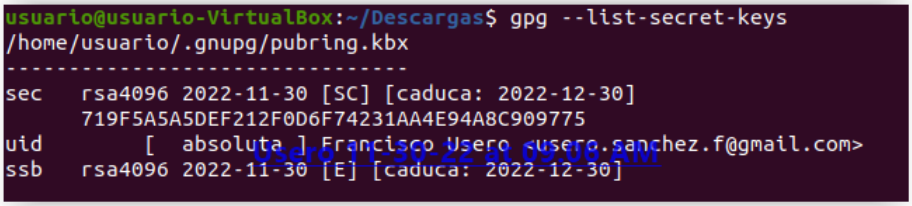
Listamos las claves publicas







Vemos las claves privada



Des-encriptamos las fotos de los demas

```
usuario@usuario-VirtualBox:~$ cd Descargas/
usuario@usuario-VirtualBox:~/Descargas$ gpg -o fotoguti --decrypt adrianparausero.gpg
gpg: cifrado con clave de 4096 bits RSA, ID 9E2A23E8B802F354, creada el 2022-11-30
      "Francisco Usero <usero.sanchez.f@gmail.com>"
usuario@usuario-VirtualBox:~/Descargas$
```

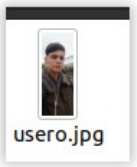
+

Escribimos la clave de paso si nos lo pide

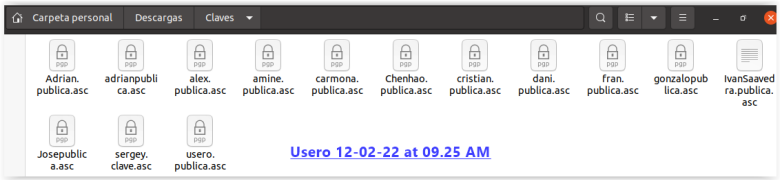
Aquí esta des-encriptada

Las fotos que hemos des-encriptado de los demás

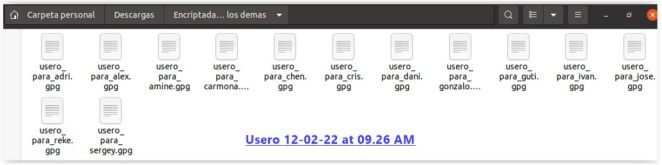
Esta es mi foto



Las claves que descargamos de los demás incluida la miá



Las encriptadas para los demás



Las encriptadas para mi
